

The present and future of phpMyAdmin

Dieter Adriaenssens

phpMyAdmin developer - ruleant@users.sf.net

FOSDEM - February 3rd, 2013

What is phpMyAdmin?

A webinterface written in PHP (and JavaScript),
to administer a MySQL database and users.

Current version

- stable version : 3.5.6

Current version

- stable version : 3.5.6
- in development : 4.0 (currently 4.0.0-alpha2)

Current version

- stable version : 3.5.6
- in development : 4.0 (currently 4.0.0-alpha2)
- available in 69 languages

Current version

- stable version : 3.5.6
- in development : 4.0 (currently 4.0.0-alpha2)
- available in **69 languages**
- avg. 2-300K downloads (every release)

Current version

- stable version : 3.5.6
- in development : 4.0 (currently 4.0.0-alpha2)
- available in **69 languages**
- avg. 2-300K downloads (every release)
- almost 3M downloads in total last year

- stable version : 3.5.6
- in development : 4.0 (currently 4.0.0-alpha2)
- available in **69 languages**
- avg. 2-300K downloads (every release)
- almost 3M downloads in total last year
- 18K commits by 242 contributors last year

Current version

- stable version : 3.5.6
- in development : 4.0 (currently 4.0.0-alpha2)
- available in **69 languages**
- avg. 2-300K downloads (every release)
- almost 3M downloads in total last year
- 18K commits by 242 contributors last year
- 10-20 active contributors per month

What's new in 3.5

Features

What's new in 3.5

Features

- improved support for stored routines, events and triggers

What's new in 3.5

Features

- improved support for stored routines, events and triggers
- openGIS support

What's new in 3.5

Features

- improved support for stored routines, events and triggers
- openGIS support
- Drizzle support

What's new in 3.5

Features

- improved support for stored routines, events and triggers
- openGIS support
- Drizzle support
- improved ENUM/SET editor

What's new in 3.5

Demo

- zoom search
- advisor : suggestions to tweak config setting in order to optimise MySQL server performance
- grid editing
- browse-mode improvements
 - flexible column width
 - reorder columns
 - AJAXification of some operations

Preparing next release

Preparing next release

It all started at the phpMyAdmin team meeting at FOSDEM 2012

- 3.6 or 4.0?

What's new in 4.0

What to expect in 4.0

What's new in 4.0

What to expect in 4.0

- code cleanup and refactoring

What's new in 4.0

What to expect in 4.0

- code cleanup and refactoring
- plugin system for import/export/auth/...

What's new in 4.0

Removal of frames

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`
- server side : response class generating pages

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`
- server side : response class generating pages
- client side : JavaScript module

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`
- server side : response class generating pages
- client side : JavaScript module
 - handles navigation

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`
- server side : response class generating pages
- client side : JavaScript module
 - handles navigation
 - retrieves pages from server using AJAX

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`
- server side : response class generating pages
- client side : JavaScript module
 - handles navigation
 - retrieves pages from server using AJAX
 - reloads pages in browser window

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`
- server side : response class generating pages
- client side : JavaScript module
 - handles navigation
 - retrieves pages from server using AJAX
 - reloads pages in browser window
 - caches pages

What's new in 4.0

Removal of frames

- get rid of html `<frames>` and replaced by `<div>`
- server side : response class generating pages
- client side : JavaScript module
 - handles navigation
 - retrieves pages from server using AJAX
 - reloads pages in browser window
 - caches pages
 - browse history

What's new in 4.0

Preview of 4.0

- new navigation tree
- improved server status monitor

What's new in 4.0

What to expect in 4.0

- code cleanup and refactoring
- plugin system for import/export/auth/...
- removal of frames
- new navigation tree

What's new in 4.0

What to expect in 4.0

- code cleanup and refactoring
- plugin system for import/export/auth/...
- removal of frames
- new navigation tree
- JavaScript and AJAX are required

What's new in 4.0

What to expect in 4.0

- code cleanup and refactoring
- plugin system for import/export/auth/...
- removal of frames
- new navigation tree
- JavaScript and AJAX are required
- documentation has a new look :
docs.phpmyadmin.net
